

With your next calibration your leads will be upgraded **free of charge** with the new Plasson Universal tips.

The leads still allow you to use the Plasson SmartFuse auto-recognition system and can be used on 4.0mm and 4.7mm fittings without the need for adaptors.

To send your control box for service, please complete the "Service Request Form" below.

Contact the Plasson team if more information is required.

Take good care of your Plasson control box

It is recommended that control boxes are serviced every 12 months or 200 hours of operation

Frequent servicing of your control box reduces the risk of operational problems interrupting the flow and costing you money.

Plasson Australia service control boxes in the Sydney facility.

The control box will be evaluated and a quote sent for any repairs required.

An evaluation fee of net \$80 will be charged if the quote for repair is not accepted.

A standard service includes:

- Recalibration
- Installation of latest software
- Inspection and testing of all components
- Calibration Certificate

If your control box is now due for service, complete the following "Service Request Form" and return to service@plasson.com.au
